

Future Education

We have created a Team called “3S Symposium Future Education”. If you are a member of the Saxion community (teacher, student, researcher etc.) you can simply click on the link to become a member of the Team we have created.

The symposium will start on January 8th at 10 o'clock with a meeting in the 'general' environment.

You can join the meeting by clicking on the “participate” button on the notification page.

We will show an introduction video in which we will explain the format of the symposium. After this general introduction, three rounds will be organized where you have the option to choose three presentations you want to join.

If you are not able to join from the beginning than you can look up in the schedule below when you can join a group presentation.

10:00 – 10:15 General introduction

10:20 – 10:50 First round of presentations

10:55 – 11:25 Second round of presentations

11:30 – 12:00 Third round of presentations

Presentations can be joined by clicking on the channels on the left and joining their meeting.

The future is here

Tutorial Prehistoric Pottery

Tutorial Prehistoric Pottery- Online 3D Lectures Our project is about creating an online platform which our client can use during his lessons. This platform will be used by the first year archaeology students of Saxion. The contents of the platform will consist of 3D-models, tutorials and a game. During our presentation we will show the platform and its contents.

Become happy with the development of your own profession

We have been busy researching the current behavior of the employees of Thuisgenoten, our client. With this data we have developed a proto-type of an escapebox to stimulate the employees of Thuisgenoten, to act proactively towards their own professional education. During the presentation we will present you the proto-type and inform you about the choices we have made to trigger the employees of Thuisgenoten.

VR SuperNurse

We are projectgroup VR SuperNurse and we have been developing and designing a training for nurses in Virtual Reality for the insertion of a nasogastric tube. During the symposium we will show the current simulation, which will be tested by a real nurse. A live response will of course also be requested and shared!

International minor

The last couple of months we have been working on developing and filming educational videos about archaeological skills.

These videos will be used for a new online international minor of archaeology in conflicts areas of the past.

During the symposium we will take you on our journey and show you the development of the instructional videos and the off course you get the chance to ask us questions.

Life Long Learning and Development by VR

The Life Long Learning and Development by virtual reality in Healthcare project has spent the past months working on a virtual reality application that enables healthcare professionals to experience, recognize and act on the loneliness of the elderly. During the symposium we will show you the steps that we take to make the virtual reality application and hopefully we can show you the first version.

Moc for Business Owners

The project group Moc for Business Owners worked on an e-learning prototype and advice for their client DWT. We researched the most effective learning methods and popular trends and we designed a prototype with course material. This prototype will be shown during the Symposium. Our guests can test the prototype and will see an animation that explains the content.

The future is here
