

Medical Lab on a Chip

On January 8 we will host the symposium which is where every group will show their final product and what each group have achieved in the last couple of months. The contact persons have decided that to keep the presentations interesting we will let every group decide if they want to present their results with a poster, a presentation, or a short video clip. After every presentation there will be a 5-minute break in which the public can rate the presentation on a scale of 1 to 10 (we ask you to be nice to every group). After all the groups have presented their final product a winner will be chosen based on these ratings and the average score for every group will be mentioned. The order in which each group will present is as follows:

14:00-14:20 = Heart on a Chip – BEAT-IT
14:25-14:45 = Chip Alignment – HiLoCo
14:50-15:10 = CytokineSens – Early Detection of Sepsis
15:15-15:35 = Microfluidic platform
15:40-16:00 = Breast Cancer Research on a Chip

In conclusion on January 8 from 14:00-16:00 we hope to see not only the students who worked on this project but also the contact persons and clients who helped during the project.

The future
is here
